EPILOGUE, IF THERE’S TIME:

A FEW OTHER EXAMPLES

OF RAIN GARDENS AND
BIORETENTION BASINS
Virginia Department of Game and Inland Fisheries
“The bioswale in front of the office is truly living up to its name. Within the first year of existence, I have documented 7 species of frogs (Green Frog, Bullfrog, American Toad, Green Treefrog, Upland Chorus Frog, Southern Cricket Frog and Southern Leopard Frog), 1 hatchling snapping turtle and 1 species of salamander (spotted). I took the attached photo last Friday night during the monsoon-like rains. Although some of these species are only transients, some are breeding on-site. It’s a good example of how these types of structures can work effectively as stormwater control and habitat.”
