Grand Canyon National Park

Oh How Our Garden Has Grown....

Presented by:

Vegetation Program Manager
March 23, 2016
Every day of the year, a flower is blooming somewhere in the Grand Canyon! Often beautiful, sometimes treacherous, plants achieve the extraordinary feat of transforming sunlight into energy, thus serving as the basis for all animal life on Earth.

Best known for its grand vistas and geologic wonders, the Grand Canyon is also home to more plant species than any other national park, and nearly half of all the species that grow in Arizona—the state with the fourth greatest plant diversity of the entire United States.
Native Plant Nursery – 2015 Results

- Collected over 30 pounds of seed from over 127 species.
- Propagated 10,818 plants.
- Increased cutting propagation (51% success).

* We are holding over 25,000 plants for the upcoming Orphan Mine restoration project – lots of putting up.
